Dear Ladies and Gentlemen,

I read your offer for an internship as a Digital designer, and I'm happy to have the opportunity to apply.

Your company has always been the forerunner of modern technology and it is truly inspiring how you have created such a strong bond between hardware and software, that effectively beats out the competition year after year. I would love to be part of this historic company, starting with an Digital Design internship.

I am currently attending Karlsruhe University of Technology (KIT), where I have worked on multiple hardware-based projects, for instance the development of a motorized Segway. Additionally, I will complete my Bachelor of Science there at the beginning of 2023.

Already in my childhood I was fascinated by the world of electrical engineering. With my enthusiasm, some imagination and the help of some construction kits, I used to try to develop robots suitable for everyday use. The choice of study was thus pre-programmed at an early stage. With the internship position and a job in your company, I hope to be able to further develop and deepen my knowledge through the immediate proximity of theory and practice. The thought of learning the spectrum of electrical engineering in a world-leading company simply motivates and inspires me.

Through my activities in my sports club and as a waiter, I have learned that teamwork is one of the most important prerequisites for success and recognition. My current work as a student assistant helps me to quench my thirst for knowledge, to structure and organize myself when it comes to scientific work and to broaden my horizons.

I hope to have awoken your interest and I look forward to a positive response.

Internship period: 04.04.2022 – 30.09.2022 (one semester).

Best regards,

Anselm Scherr
